SELECT for Cities

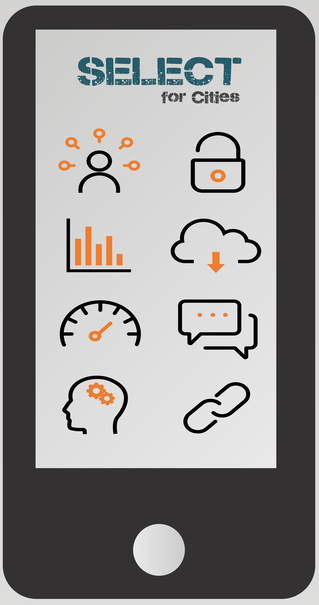
Pre-Commercial Procurement (PCP) to turn Cities into large scale Innovation Labs with the Internet of Everything

Future Cities Dashboards

Personalised individual dashboards created and shared based on needs

Dynamic visualisations (inc. 3D) to drill down into data to sensor level and generate business intelligence

Predictive analytics enables situations to be mitigated before they arise



Fully open source using open standards to facilitate open innovation and reduce vendor lock-in

Modular architectures for self healing and auto-scaling

Smart chatbots use Natural Language Processing capabilities for more personalised assistance

Secure transactions through blockchain to trace actions and provide cryptocurrency rewards
